BUSINESS PERFORMANCE AND SALES ANALYSIS

Synthetic sample report for testing an AI Business Intelligence Assistant

REPORT DETAIL	VALUE
Reporting period	January 2025 – March 2026
Transactions	150 synthetic sales orders
Currency	Indian Rupees (INR)
Companion workbook	Sample_Sales_Data.xlsx

Notice: All customers, transactions and performance figures are fictional and generated only for application testing.

1. Executive Summary

The sample contains **150 orders** across four regions, three channels and six products. Revenue after discounts is **■18,265,727**, cost is **■14,133,000**, and gross profit is **■4,132,727**. Overall gross margin is **22.6%**.

KPI	RESULT
Orders	150
Units sold	662
Revenue	■18,265,727
Cost	■14,133,000
Gross profit	■4,132,727
Gross margin	22.6%
Average order value	■121,772

The highest-revenue region is South. The highest-revenue product is Laptop Pro. The largest channel by revenue is Retail.

2. Business & Dataset Profile

The fictional business is a multi-region retailer selling electronics, accessories and furniture. The workbook stores one row per sales order.

DIMENSION	VALUES
Period	Jan 2025 – Mar 2026
Regions	North, South, East, West
Channels	Online, Retail, Distributor
Categories	Electronics, Accessories, Furniture
Products	Laptop Pro, Smartphone X, Wireless Headphones, Smart Watch, Office Chair, Standing Desk
Customers	30 synthetic customer IDs
Salespeople	6 fictional names

Each transaction includes order ID/date, customer, region, channel, salesperson, product/category, quantity, unit price, unit cost, discount, revenue, cost and profit.

The data is intentionally varied to support filtering, grouping, trend analysis and profitability calculations.

3. Revenue & Profitability

Revenue is recorded after discount. Cost is quantity multiplied by unit cost. Gross profit is revenue less cost; gross margin is gross profit divided by revenue.

MEASURE	AMOUNT	DEFINITION
Revenue	■18,265,727	Sales value after discount
Cost	■14,133,000	Quantity × unit cost
Gross profit	■4,132,727	Revenue – cost
Gross margin	22.6%	Profit ÷ revenue
Average order value	■121,772	Revenue ÷ order count

Test questions: calculate total revenue, cost and profit; calculate gross margin; find low-profit orders; compare average order value by region; examine how discounts affect profit.

4. Regional Performance

Regional performance can be compared using revenue, profit, order count, units sold and average order value. Revenue share is each region's revenue divided by total revenue.

REGION	REVENUE	SHARE
South	■6,293,282	34.5%
North	■4,774,430	26.1%
East	■3,937,599	21.6%
West	■3,260,415	17.8%

South is the leading region by revenue in this generated dataset, with 34.5% of total revenue.

Test questions: rank regions by revenue and profit; identify the highest average order value; compare South and West; find regions with high revenue but weaker margins.

5. Product & Category Performance

The catalogue contains six products grouped into three categories. Product-level revenue, profit, margin and units sold provide different views of performance.

CATEGORY	REVENUE	SHARE
Electronics	■13,233,326	72.4%
Furniture	■3,780,559	20.7%
Accessories	■1,251,842	6.9%

PRODUCT	REVENUE
Laptop Pro	■8,778,796
Smartphone X	■4,454,530
Standing Desk	■3,091,967
Smart Watch	■890,649
Office Chair	■688,592
Wireless Headphones	■361,193

The highest-revenue product is Laptop Pro. Revenue leadership alone does not prove the product has the highest margin or profit.

6. Sales Channel Analysis

Transactions use Online, Retail and Distributor channels. Channel comparisons should include revenue, order count, quantity, average order value and profit.

CHANNEL	REVENUE	SHARE
Retail	■7,532,485	41.2%
Online	■6,613,027	36.2%
Distributor	■4,120,215	22.6%

Retail is the largest channel by revenue in this sample.

Test questions: compare Online and Retail; calculate channel gross margins; identify which channel has the highest average order value; examine whether discount levels vary by channel.

Marketing spend, customer satisfaction and acquisition cost are not included, so return on marketing investment cannot be calculated.

7. Monthly Sales Trend

The dataset spans January 2025 through March 2026. Monthly revenue is calculated by grouping transaction dates by calendar month.

MONTH	REVENUE
2025-01	■1,043,966
2025-02	■884,587
2025-03	■868,867
2025-04	■1,039,765
2025-05	■1,066,011
2025-06	■1,613,800
2025-07	■1,509,119
2025-08	■2,101,699
2025-09	■1,291,046
2025-10	■873,231
2025-11	■1,203,924
2025-12	■1,695,194
2026-01	■928,187
2026-02	■877,464
2026-03	■1,268,866

Test questions: identify the strongest month; compare Q4 2025 with Q1 2026; calculate month-over-month changes; describe any possible seasonal pattern.

Caution: this is a small synthetic dataset covering only 15 months. It is not suitable for reliable long-term forecasting or causal conclusions.

8. Management Recommendations & Limitations

Potential actions to investigate (not verified business decisions):

1. Regional review: investigate drivers of the leading region and whether successful practices can be replicated.
2. Product mix: compare gross profit and margin before changing inventory priorities.
3. Channel economics: review discounts and profitability, not revenue alone.
4. Discount control: identify transactions where discounts materially reduce profit.
5. Monthly monitoring: review revenue, profit, units and average order value.

Dataset limitations

• All records are synthetic.
• Returns, taxes, shipping, salaries, marketing spend and inventory are excluded.
• Customer demographics and satisfaction scores are unavailable.
• The period is short and unsuitable for robust forecasting.
• Salesperson names are fictional and should not be used for employee evaluation.

The assistant should distinguish calculations supported by the files from assumptions and recommendations requiring more evidence.

9. AI Assistant Testing Guide

TEST TYPE	EXAMPLE PROMPT
Document Q&A	What is the reporting period and how many orders are included?
KPI calculation	Calculate total revenue, cost, gross profit and gross margin.
Regional analysis	Rank all regions by revenue and explain the leading region's share.
Product analysis	Which product has the highest revenue and which has highest profit?
Channel comparison	Compare Online, Retail and Distributor by revenue and profit.
Trend analysis	Show monthly revenue and identify the strongest month.
Combined analysis	Identify the top region and product, then give three data-supported recommendations.
Report generation	Prepare a business performance report using both uploaded files.

Glossary

Revenue: sales value after discount. **Cost:** quantity multiplied by unit cost. **Gross profit:** revenue less cost. **Gross margin:** gross profit divided by revenue. **Average order value:** revenue divided by order count.

End of sample report — generated solely for application testing.
